

Preserved 10×150 Reservoir Model

Compact presentation view — the repeated reservoir motif is drawn once

Representative reservoir state $x_k(t)$

150 recurrent neurons

Preserved anchor: $z_k(t) = z_1(t) + 0.1 \tanh(W_k x_k(t) + b_k), k = 2, \dots, 9$

1,500 fixed recurrent neurons • 18 latent neurons • 3,022 trainable parameters

— Fixed random weights — Trainable weights ● Preserved 2D latent
