

Preserved 10×150 Solar Reservoir Network

1,500 fixed recurrent neurons • 9 explicit 2D bottlenecks • 3,022 trainable parameters

Preservation: $z_k(t) = z_1(t) + 0.1 \tanh(W_k x_k(t) + b_k)$, $k = 2, \dots, 9$ • all 1,500 reservoir and 18 latent neurons are drawn; edges are sampled for readability.

— Fixed random weights — Trainable weights ● Reservoir neuron ● Latent neuron ● Preserved primary latent z_1
